

AWS Cloud Infrastructure Project

This project showcases a real-time AWS cloud implementation including EC2, Application Load Balancer, Route 53, S3, and CloudWatch. The architecture focuses on scalability, monitoring, and best practices. Each page highlights a core AWS service with a large, clear screenshot suitable for professional presentation and LinkedIn sharing.

Portfolio Website Deployment: This screenshot confirms the successful hosting of a personal cloud portfolio website on AWS, accessible via a custom domain and load balancer.

Application Load Balancer (ALB): Demonstrates traffic distribution across EC2 instances, improving availability, fault tolerance, and scalability.

Route 53 > Hosted zones > samithcloudtech.in
